Comprehension:

Ethical living is concerned primarily with the interpersonal dimension of our behavior. How do we treat one another individually and in groups---and increasingly, other species and the environment? The key here is that morality brings us into contact with others and asks us to consider the quality of that contact. We start asking ourselves: 'Is that the way I should treat someone else?' 'Is that the way someone else should treat me?' Because we have the ability to be critical of our interpersonal behavior and our interaction with animals, we have the ability to develop codes and norms to guide that behavior and interaction. Those moral norms and codes, in addition to a set of virtuous character traits, are what we mean when we talk about ethics.

Ethics poses questions about how we ought to act in relationships and how we should live with one another. Ethics asks us to consider whether our actions are right or wrong. It also asks us how those character traits that help humans flourish (such as integrity, honest, faithfulness and compassion) play out in everyday living. Ethical norms and principles have developed over time and across cultures, as rational people of goodwill consider human relationships and how human beings act when they are at their best.

This everyday ethical reflection must occur before we can effectively confront the larger moral questions. A person who wants to take moral leadership in global issues must take special responsibility for what is going on inside his or her own self—inside his or her own consciousness—lest the act of leadership create more harm than good. All of us can be leaders for good; the choice is ours.

Comprehension:

The export hubs are expected to act as a center for favourable business infrastructure and facilities for cross-border e-commerce, including facilitating faster customs clearance of cargo and also addressing the problem of reimportation because about 25 per cent of goods in e-commerce are reimported. Additionally, the hubs will offer warehousing facilities, processing returns, labelling, product testing, repackaging items and dedicated logistics infrastructure for connecting to and leveraging the services of nearby logistics hubs, thereby achieving agglomeration benefits for exporters.

In an attempt to leverage e-commerce platforms to support local exporters, manufacturers and MSMEs in reaching potential international buyers, the DGFT signed a memorandum of understanding with global e-commerce firm Amazon last year to offer capacity-building sessions, training and workshops for MSMEs across districts identified by the DGFT as part of the "District as Exports Hub" initiative. Amazon surpassed \$8 billion in cumulative exports from India in 2023 and aims to achieve its ambitious target of \$20 billion by next year.

India's exports through online platforms stood at \$8-10 billion in 2022-23 compared to China's staggering figure of more than \$300 billion. A key reason for this gap is the cumbersome compliance process associated with exports, especially when it comes to payment reconciliation, which is particularly challenging for new or small exporters. At the same time, global cross-border e-commerce trade was \$800 billion. With India's cross-border e-commerce exports likely to increase to \$200 billion over the next six to seven years, it can become a key strategy in achieving the \$2 trillion overall exports target by 2030.

India's services export increased by only \$15.8 billion in 2023-24 over 2022-23, while merchandise export declined \$14 billion in the same period. Overall, India's combined value of exported goods and services registered a marginal increase of around \$2 billion in 2023-24. At a time when export growth remains tepid and the overall trade deficit is around \$78 billion, establishing a supportive e-commerce ecosystem can truly give a fillip to India's export performance. Given the patchwork of rules and export provisions framed for exporters, there is an urgent need for a separate e-commerce export policy, which can ease the compliance burden on exporters.

SubQuestion No : 141**Q.141**

Which of the following statements are correct based on export related details given in the passage?

- A. India's services export declined in 2023-24 over 2022-23
- B. India's export through online platform is less than China in 2022-23
- C. Amazon targets to double or more than double its exports from India in 2024-25
- D. More than 20% of goods in e-commerce are reimported
- E. India's merchandise exports increased in 2023-24 over 2022-23

Choose the correct answer from the options given below:

- 1. A, B & C Only
- 2. B, C & D only
- 3. C, D & E Only
- 4. A, B & E Only

Options 1.1

- 2. 2
- 3. 3
- 4. 4

Option 3 ID : 34212361967

Option 4 ID : 34212361968

Status : Answered

Chosen Option : 4

Comprehension:

National power demand in India has hit 250 Gw, 25 per cent more than last year and 71 per cent more than in 2022. The power ministry has rightly taken pride in ensuring that thermal power stations have adequate stocks of coal to keep the lights, fans and air-conditioning on. This has been a chronic problem in previous summers, leading to prolonged outages. This year, coal stocks have reached plants well on time. As on June 23, 2024 thermal power plants had 16 days of stocks as against 9.4 days on June 23, 2022 and 12.7 days on the same day in 2023.

The Government expects to add 15.4 Gw of coal-fired capacity in 2024-25, the highest in 9 years and 90 Gw by 2032. A programme of “Coal Reforms 3.0” is on the agenda to increase the availability of coal for industrial sectors, especially steel units, with the broad objective of reducing imports to zero in the next two financial years.

India has set a target to achieve 50 per cent cumulative installed capacity from non-fossil fuel-based energy resources by 2030 and has pledged to reduce the emission intensity of its gross domestic product by 45 per cent by 2030, based on 2005 levels. The installed capacity of non-fossil power in India is now 45.3 per cent of the total capacity, putting India on track to exceed its climate-change commitments. But this is illusory progress. The absence of viable storage technologies has limited grid offtake from renewable sources.

Encouraging industry to continue its dependence on coal is unhelpful. In this respect Coal Reforms 3.0 appears to be at odds with a scheme announced earlier this year for a pilot project for given hydrogen to replace coal both as a fuel and as feedstock (which is possible even in steel produced through the blast furnace route). Given that coal-based thermal plants are responsible for a disproportionately higher share of emission than the industrial sector, the government may do well to power India’s economy in the immediate future.

SubQuestion No : 146**Q.146**

Out of the total installed Power capacity, the installed capacity of fossil power is:

1. 45.3%
2. 50%
3. 54.7%
4. 45%

Options 1. 1

2. 2
3. 3
4. 4
